Hello again,

Thank you for the opportunity to provide testimony during the hearing. I would like to submit a written statement as well.

As a Duke Energy customer, a clean energy advocate and a supporter of energy equity, I am in support of Duke Energy's Net Energy Metering proposal and the continued viability of third party leasing options. I also serve as Program Director at SW and SC IPL two SC based organizations that use education, collaboration and advocacy to create sustainable, caring and equitable communities. Third party leasing has led to increased access to solar for low/mid income customers in types of communities we serve.

I'd like to see that access continue as long as there are consumer protections in place and as long as the leasing companies follow the highest ethical standards and are held to those standards by the state.

A recently published study from Berkley Lab shows that SC has the highest percentage (21%) of SC solar adopters earning 50k or less. The report found that TPO is the driver behind the increased adoption of solar by lower income households in South Carolina. TPO systems will be critical for continuing to expand rooftop solar and for giving LMI households access to this technology.

The study home page is here: <https://emp.lbl.gov/publications/residential-solar-adopter-income-and>

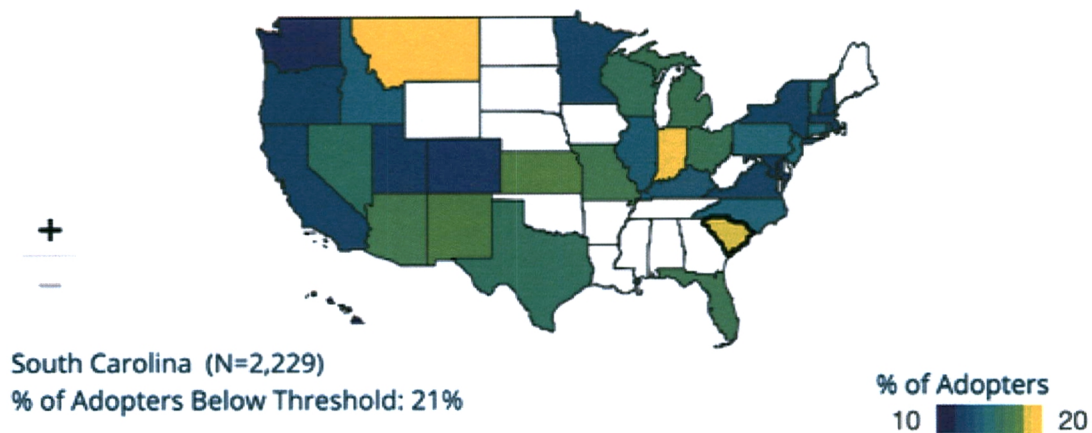

The study summary slides are here: https://eta-publications.lbl.gov/sites/default/files/solar-adopter_income_trends_final.pdf

The Study's data tool is here: <https://emp.lbl.gov/solar-demographics-tool>

% of Solar Adopters with Annual Income Below \$50k

2019

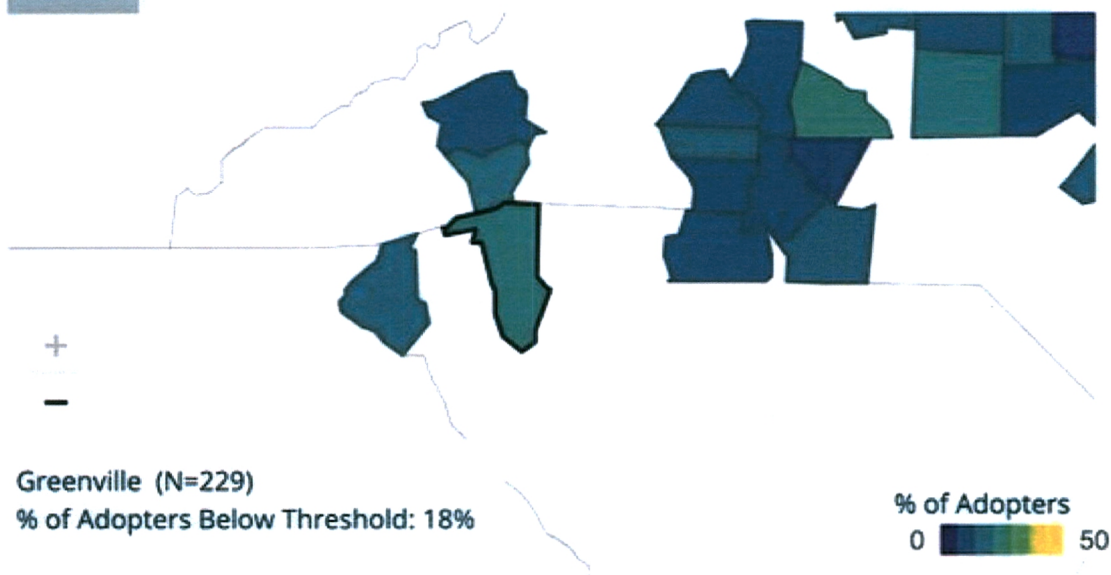

All Years

% of Solar Adopters with Annual Income Below \$50k

2019

All Years

Third-Party vs. Host-Owned Systems

Median Income (Thousand \$)

Median Relative Income (% of AMI)

TPO Share of Sample

- Solar adopter incomes for third-party owned (TPO) systems are presently lower, and have declined much more significantly over time, compared to host-owned systems
 - Though not shown here, state-level comparisons generally exhibit the same basic trends
- O'Shaughnessy et al. (2021) found that TPO has driven adoption by lower income HHs
- Implication is that the general trend toward lower income solar adopters, observed earlier, can be substantially attributed to TPO
- The recent decline in TPO market share has likely dampened the overall trend toward lower income solar adopters

Good Afternoon Ms. Brewster,

The Public Service Commission has received your pre-registration to testify in Docket Nos. 2020-264-E & 2020-265-E. We will call you on Wednesday, April 21, 2021 for you to deliver your remarks around 9:45 a.m. at 1:30 PM.

Please be aware that the Commission may call you at any time after the beginning of the hearing. The Commission will only attempt to reach you up to three (3) times.

Thank you,

PSC Communications
